

Reproducible Research

An Introduction to `knitr`

According to the American Physical Society:

*Science is the systematic enterprise of gathering knowledge about the universe and organizing and condensing that knowledge into **testable** laws and theories. The **success and credibility of science** are anchored in the **willingness** of scientists to **expose their ideas** and results to **independent testing** and **replication** by other scientists*

RR: A Minimum Standard to Verify Scientific Findings

RR: A Minimum Standard to Verify Scientific Findings

Reproducible Research (RR) in Computational Sciences

The data and the code used to make a finding are available and they are sufficient for an independent researcher to recreate the finding

	GLM	GLMM	GLS
Intercept	2.64 [2.38; 2.90]*	2.20 [0.98; 3.41]*	3.55 [1.7
