presentation

Final Remarks

## According to the American Physical Society:

*Science is the systematic enterprise of gathering knowledge about the universe and organizing and condensing that knowledge into **testable laws and theories**. The **success and credibility of science** are anchored in the **willingness of scientists to expose their ideas and results to independent testing and replication by other scientists***

output

004-figures

005-beamer-  
presentation

006-sensitivity-  
analysis-one-  
parameter

007-sensitivity-  
analysis-many-  
parameters

008-large-  
documents

009-rmarkdown

010-rmarkdown-  
presentation

Final Remarks

**Figure 2 :** Adam Smith, author of *The Wealth of Nations* (1776), in which he conceptualizes the notion of the division of labour

## Division of Labour

Composition and logical structuring of text is the author's specific contribution to the production of a printed text. Matters such as the choice of the font family, should section headings be in bold face or small capitals? Should they be flush left or centered? Should the text be justified or not? Should the notes appear at the foot of the page or at the end? Should the text be set in one column or two? and so on, is the typesetter's business

# The Genius Behind L<sup>A</sup>T<sub>E</sub>X

analysis-many-  
parameters

008-large-  
documents

009-rmarkdown

010-rmarkdown-  
presentation

Final Remarks

**Figure 3 :** The T<sub>E</sub>X project was started in 1978 by Donald Knuth (Stanford). He planned for 6 months, but it took him nearly 10 years to complete. Coined the term “Literate programming”: mixture of code and text segments that are “human” readable. Recipient of the Turing Award (1974) and the Kyoto Prize (1996).

# R output within the text

## Reproducible Research

What?

Why?

001-motivating-  
example

## Getting Started

L<sup>A</sup>T<sub>E</sub>X

RStudio

**knitr**

## Examples

002-minimum-  
working-example

003-model-  
output

004-figures

005-beamer-  
presentation

006-sensitivity-  
analysis-one-  
parameter

007-sensitivity-  
analysis-many-  
parameters

008-large-  
documents

009-rmarkdown

010-rmarkdown-  
presentation

## Final Remarks

- Include R output within the text
- We can do that with “S-expressions” using the command `\Sexpr{...}`

## Example:

The iris dataset has `\Sexpr{nrow(iris)}` rows and  
`\Sexpr{ncol(iris)}` columns

produces

The iris dataset has 150 rows and 5 columns

# Changing Many Parameters in an Analysis

Reproducible  
Research

What?

Why?

001-motivating-  
example

Getting Started

L<sup>A</sup>T<sub>E</sub>X

RStudio

knitr

Examples

002-minimum-  
working-example

003-model-  
output

004-figures

005-beamer-  
presentation

006-sensitivity-  
analysis-one-  
parameter

**007-sensitivity-  
analysis-many-  
parameters**

008-large-  
documents

Final Remarks

# Opinion: Reproducible research can still be wrong: Adopting a prevention approach

**Jeffrey T. Leek<sup>a,1</sup> and Roger D. Peng<sup>b</sup>**

<sup>a</sup>Associate Professor of Biostatistics and Oncology and <sup>b</sup>Associate Professor of Biostatistics,  
Johns Hopkins University, Baltimore, MD

computational tools such as knitr, iPython notebook, LONI, and Galaxy (8) have simplified the process of distributing reproducible data analyses.
